

# INFINITY TRAIN

## DEV BOOK

Concept:

Roguelike game set in infinite train. Concept is based on the Adventure Time cartoon episode titled Dungeon Train.

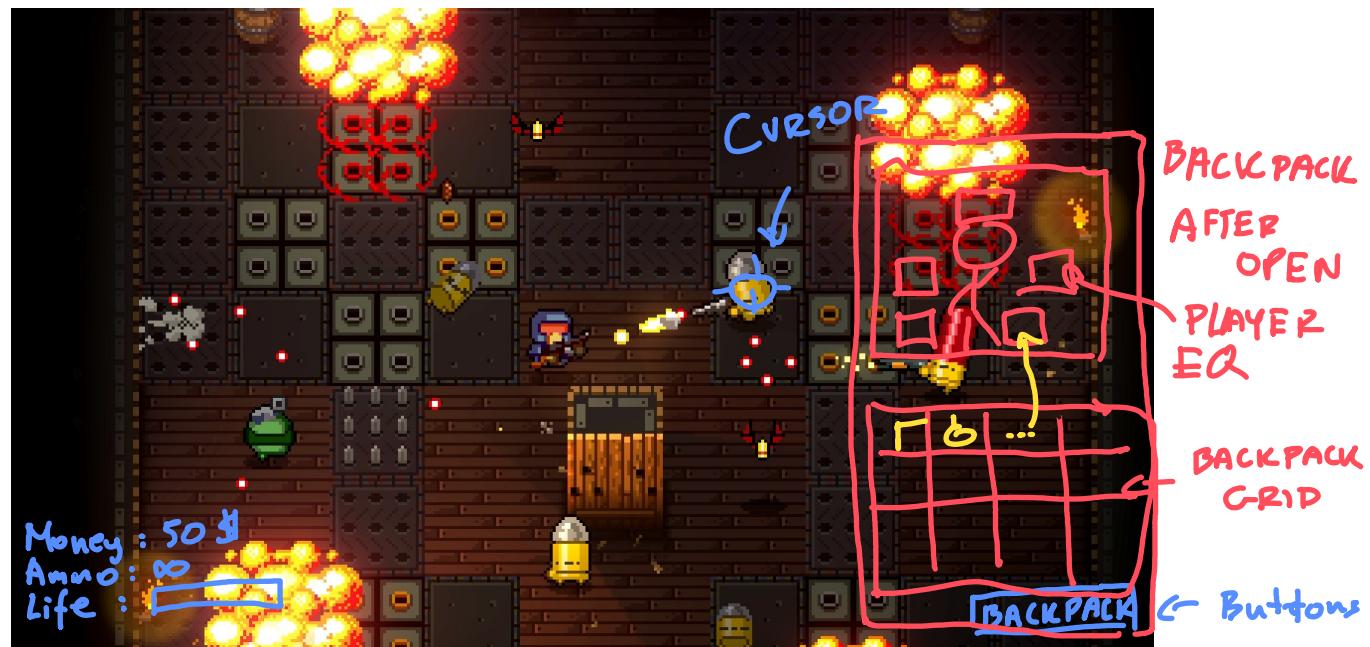

# Mechanic:

Game will be the most similar to another rogue like game Enter the gungeon. It will be have similar movement style and shooting mechanic, but i want another mechanic for weapon. In my mind weapon will have some 'lifetime' like ammunition or wear, and I want cold armors and potions. Every item will be stored in backpack and you will be able to change what you currently using. In that case items will be very recently droped from opponents.

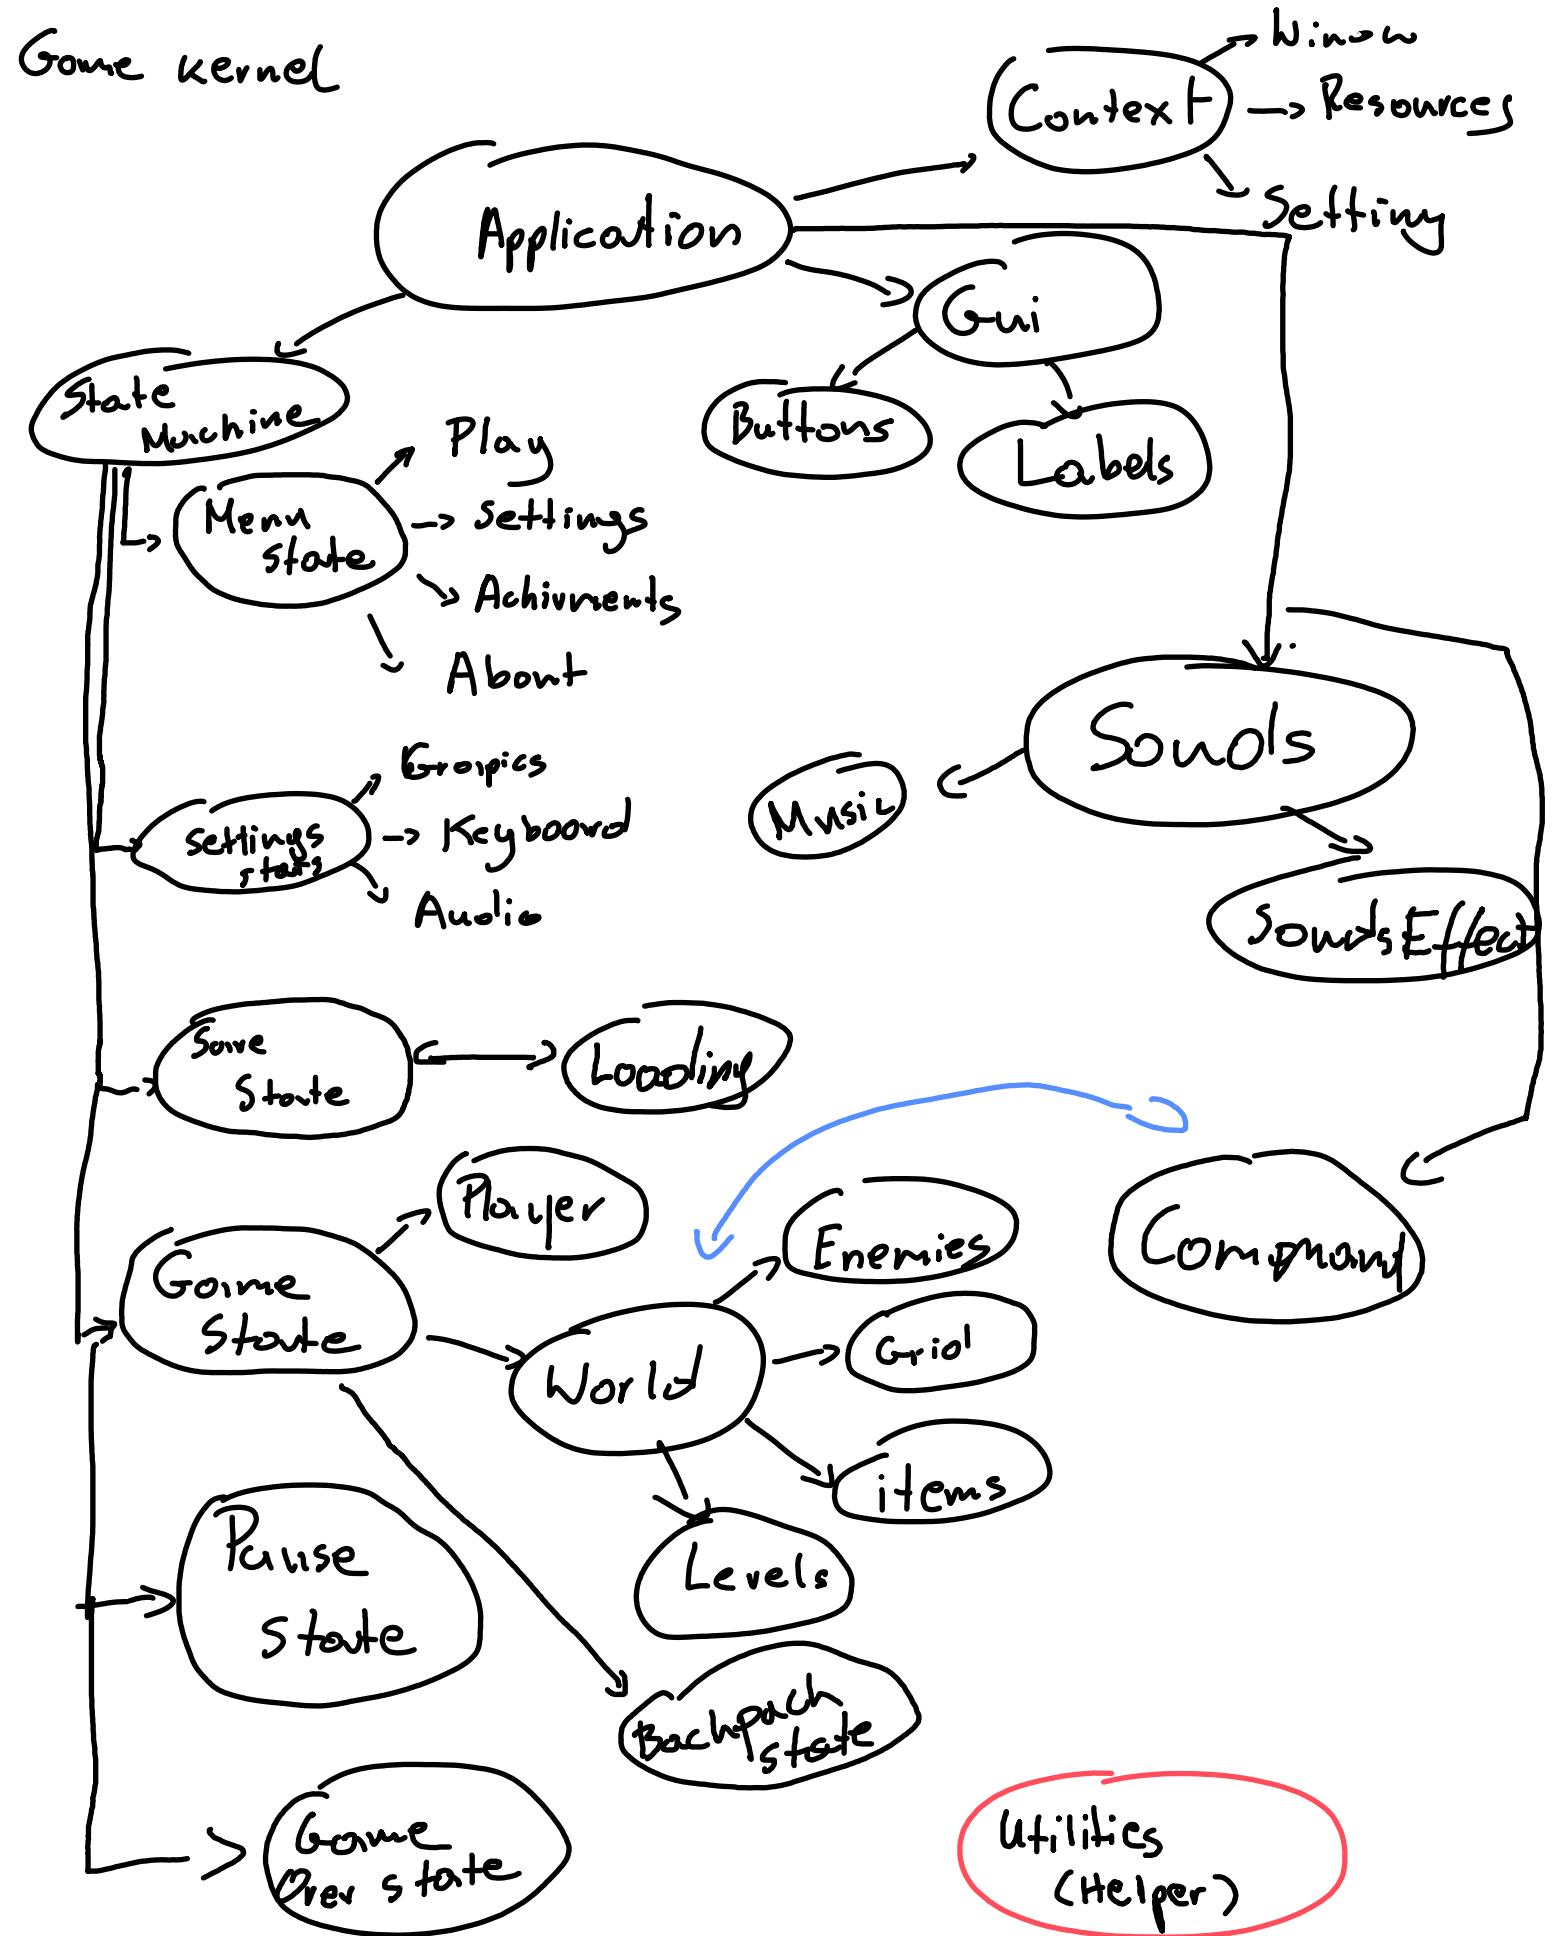

Levels (for start) will be similar to each other (same size of room) maybe with style style change. You will be come from bottom, destroy every monster in room and leave on top. There will be special rooms like shop, treasure room and boss room.

There will be few monsters. Each monster will have specific items they can drop. Level ends with boss room with special drop item

Example look:

Screen from Enter the Gungeon

MENU, SETTINGS, ACHIEVEMENT, ABOUT

SCREEN

# INFINITY TRAIN

SOME GRAPHICS

MADE  
IN SFML

Every thing here is simple. We have 4 buttons which everyone go to other state: Play - Game State, Settings - Settings State etc.

Settings is very similar only with options to change things. Achievements and About there is only text so it's not a problem.

Settings

## INFINITY TRAIN

### Settings

Resolution  
Graphics → Fullscreen

Control → More

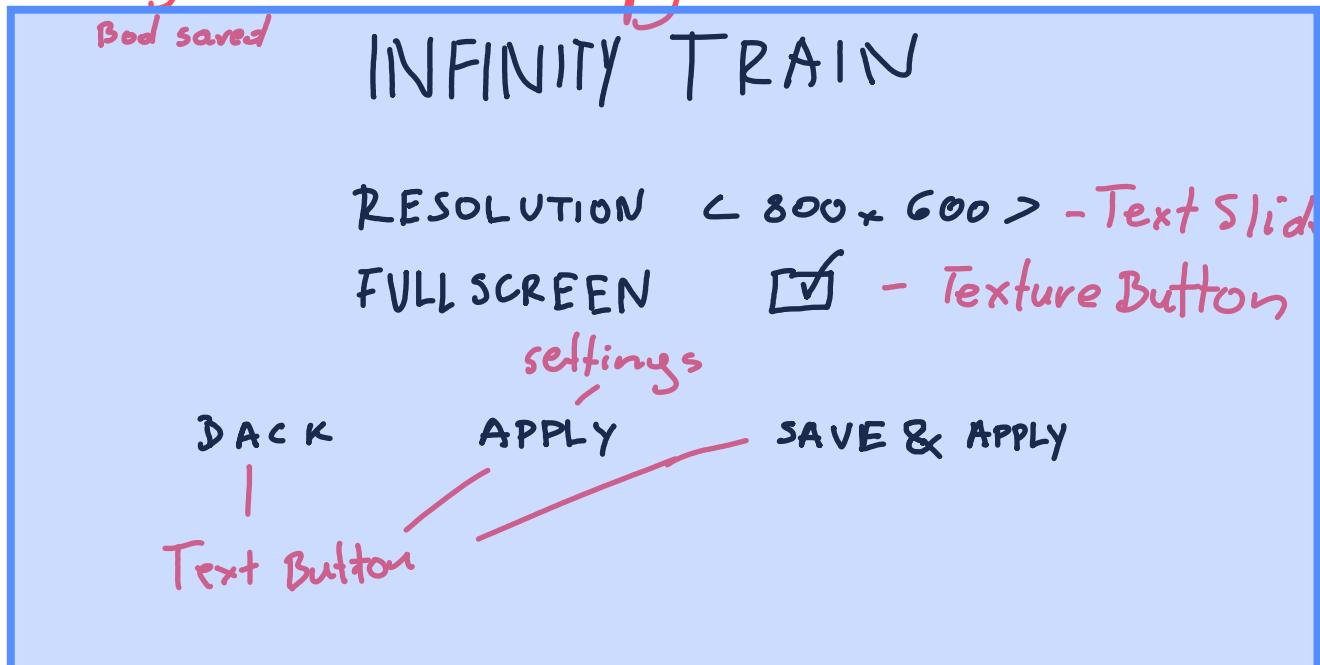

Audio → Sounds Volume  
Music Volume

Save State

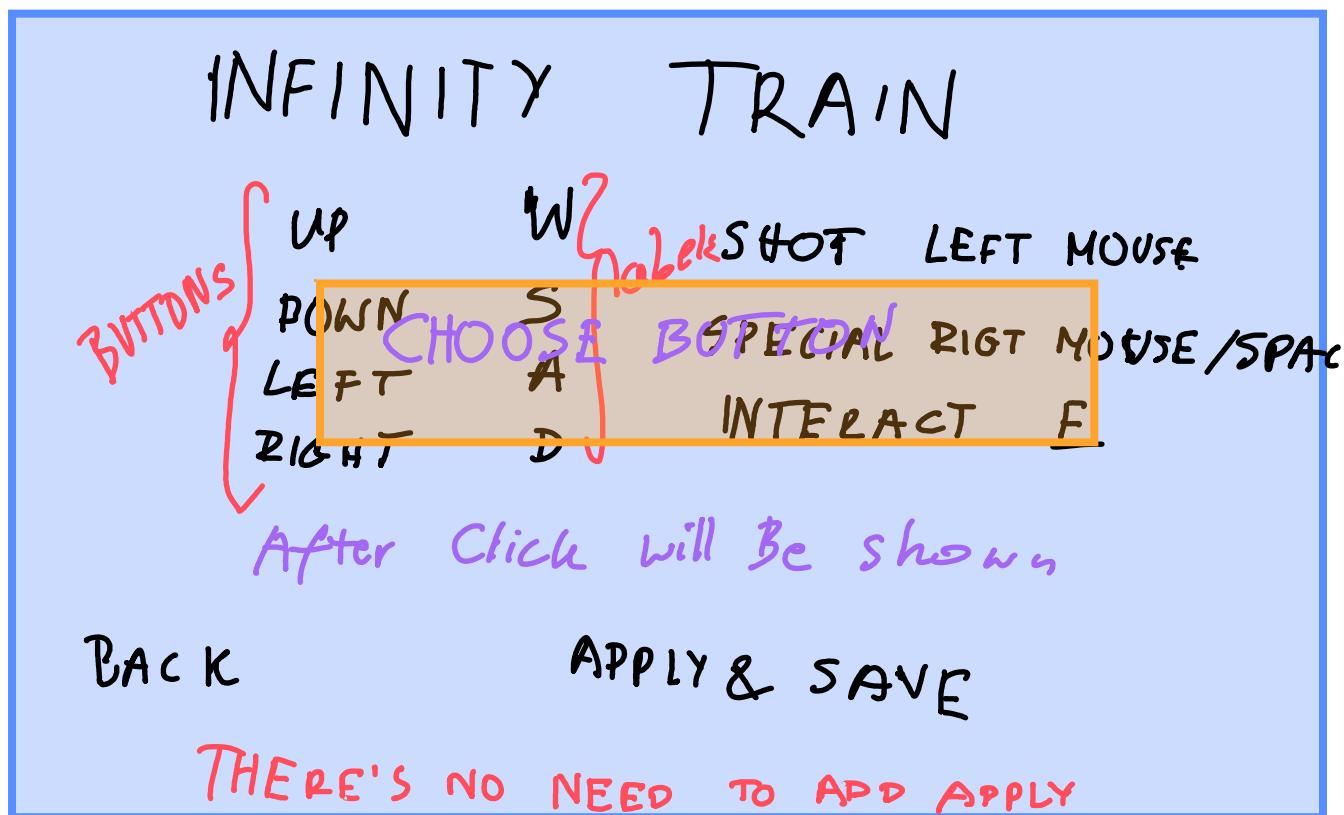

← BACK

Save state  
save options  
to settings  
struct which  
is in context

Look of Setting e.g. Graphics / Audio Settings is similar  
After coming to this state copy settings

## Control Settings

THERE'S NO NEED TO ADD APPLY

BECAUSE YOU CAN TEST IT ONLY IN THE GAME

Context spills to apply Graphics settings, such as settings it has!

# Achievements

How it work

In context we have achievement class

If we do something in game we have to refer to specific achievement

context.achievements.get(id).countUp()  
or setAchieve

## Examples of achievements

- Start the game
- Kill 1000 enemies
- Kill 10000 enemies
- Finish game once
- Finish game 10 times

| It's sub achievement  
Can we combine?

Can be combined with statistic instead achievements because every data can be pull up from statistic

So if we will have statistic class with:

- killed enemies
- number of started game
- number of dead
- number of finished game

We can also store some special achievement but not showing it in statistic

Next idea: Replace achievement with statistic in menu, I think it will be better because have

Similar mechanics and will be a little easier

## Statistic class

[

chum

{

Start game

Finish game

is e.c.t

}

method

read\_statistic

increment\_statistic

save

load

array[id, int]
